

Digital Development and Technologies

We develop websites, IT software, chatbot solutions and portals tailored to the specific business needs of our clients. Our team combines design, functionality, and advanced technology to create efficient digital solutions – from corporate and specialized applications to business automation systems.

We also develop chatbot solutions that enhance user communication and improve the efficiency of business processes.

Our References

Throughout our work, our team has collaborated with numerous domestic and international partners, providing services in digital marketing, video production, software development, and advanced web technologies.

Some of our completed projects include:

- **LLC dba The Gotham Hotel** – Video filming and production of promotional materials; brand identity development, audience development, pre-optimization, and benchmarking.
- **INTEC Erasmus Project** – Preparation and production of promotional video materials.
- **Zeb Consulting** – Monitoring and measurement of business activities and process durations through a specialized application.
- **UDG – Faculty of Information Systems and Technologies** – Website development and maintenance; hosting and domain configuration for a 24-month period, project HPC4S3ME
- **Forum Restaurant** – Digital marketing services and social media promotion.
- **Confucius Tourism Classroom** – Design and production of promotional materials.
- **ME STUDY IN ENGLISH Erasmus Project** – Creation of an informational chatbot for the university enrolment campaign (a computer program simulating user conversation).

Recommendations from our partners are available upon request.
